Honey bees are social insects. There are different types of bees – drones, workers and queen bees. They live together in a beehive.

The work in a beehive is divided between the bees. The queen is the biggest bee in the colony. She is the only bee that lays eggs. Sometimes a queen can lay 3,000 eggs in a single day. Can you find the queen in this picture?

Worker bees are female, but do not lay eggs. A colony can have 50,000 to 60,000 workers. Workers give food to the queen and babies. They clean the hive. Some workers build the comb and store the food. Older workers collect the food from the flowers and make the honey.

What is the worker bee doing in this picture?

People collect the combs from the beehive. They put the honey in jars and we eat it – yum!

Can you see the comb in this jar?

Drones are male bees. They have very big eyes. Look at this drone. Look at his eyes. Drones don't collect food from flowers or work in the hive. But life isn't all good! When there isn't enough food or when it's cold the workers push them out of the hive and they die.
